Javascript | TypeScript | React | Node JS | Redux | GraphQL | Jest | HTML | CSS | SQL | MySQL | Git | Unit testing | React testing Library | Enzyme | AWS | Splunk | Datadog | Spinnaker | CICD | Docker | Github Actions
Microservices

PROFESSIONAL EXPERIENCE

Senior Software Engineer, EPAM Systems

Jun 2024 - Present

As a contractor for an American healthcare company that operates a telemedicine platform to track drug prices and provide coupons for discounts on medications.

- Enhanced conversion rates up to ~30% for multiple pharmaceutical products by conducting iterative experiments and systematically refining designs to optimize outcomes.
- Enhanced SEO performance by leveraging Botify's advanced crawling capabilities to identify and rectify technical issues adversely affecting our Google rankings.
- Contributed to the successful migration of our legacy system into a new monorepo, enhancing code reusability, simplifying dependency management, and improving team collaboration.

Software Developer, Luxoft

December 2021 - Jun 2024

As part of multiple collaborative teams, worked for one of the top and most known travel agencies in the United States, developing their onboarding systems for both rental and hotel properties.

- Achieved an increase in conversion success rate for the initial partner onboarding funnel of a vacation rental system; the rate went from ~45% to over ~60% in the span of just 30 days.
- Implemented series of UI AB tests on the onboarding flow; new hero design and exit pop up interaction. This increased the conversion rate by 1.5% and the most successful one by 3%.
- Joined the team of Code Owners responsible for reviewing and ensuring high-quality standards for internal projects by providing my expertise on the subject. Increasing the development and deployment speed from days, sometime weeks, down to a goal of maximum one day.
- Built monitoring and metric dashboards showing the real time performance of the application. The product owners, stakeholders and engineering team could retrieve important insights regarding the site without needing the team's assistance, speeding up both parties' productivity.
- Wrote unit tests for four different projects, increasing their code coverage up to ~90% to satisfy the internal standard of 85%.
- Revamped a legacy system, creating a better client facing UI. Also allowing the code base to be worked on by other developers using the new technology and meeting internal tech requirements.

Full stack Developer, Axovia Marketing

April 2019 - December 2021

- *Enterprise Resource Planning for Real State agency*
- *Car Rental - Website | Content Management System | Backend Service*

EDUCATION

Bachelor in **Computer Systems Engineer**

IA Certified

Instituto Tecnológico Mario Molina

Universidad del Valle de México
